

# SERIOUS TOOLWORKS INC

*"Isn't it time you get Serious?"*

## When you want quality woodturning tools the difference is in the details

**Serious Toolworks makes only heavy-duty, oversized woodturning tools and a premium lathe and accessories** -- all backed by a 100% satisfaction guarantee. The high-quality materials and sturdy designs of our tools and accessories ensure unmatched efficiency, wear resistance, and performance.

Since 1998, Serious Toolworks (formerly Serious Lathe Co.) has been producing tools using significantly superior materials and designs:

CUTTER WHEELS

KNURLING TOOL WITH CUTTER  
WHEELS

SCRAPERS

### Tool Material:

- All Serious cutting and scraping tools are produced with A2 tool steel.
- A2 steel offers high abrasion resistance for turning hardwoods at high speeds.
- A2 steel is tough enough to survive dramatic catches and flex under normal turning stress.
- All Serious tools are vacuum heat-treated to 1750° F, delivering a hardness of C 62 Rockwell

### Tool Design

- The Serious scraper/handle system is the only one of its kind on the market today.
- Serious Scrapers offer 9" -- not the traditional 5-7 inches -- of working tool length.
- Serious bowl gouges are 16" long and up to 1" in diameter.
- Serious gouges 3/4" and smaller feature tip-to-tip fluting.
- All Serious gouges are 16" long and provide a minimum of 10" (& 13" max) of useable fluted tool length, far more than the standard 5" to 7".

**Questions & Ordering:** Please call us at 1-800-211-1484, e-mail us at [info@serioustoolworks.com](mailto:info@serioustoolworks.com), or fill out our online contact form ([http://www.serioustoolworks.com/contact\\_us.php](http://www.serioustoolworks.com/contact_us.php)) to send us questions about the SL2542 wood lathe, our wood turning tools, services and orders.
